Arrows with Barricades

1. Remember UK rules apply – you can use roads only once.
2. First plot the shortest route to TC51 which includes all three arrows in the indicated direction, including the barricades (the crosses on the arrows).
3. Then plot detours to that route to avoid the four barricades. As well as avoiding the barricades, the detours should cut out as little of the arrows as possible.
4. Your final route, including the detours, should therefore be as short as possible but, as a priority, include as much of the arrows as possible, and always in the indicated direction.

Note: this romer is the same as the one on the map. Use it to confirm that the scale is correct if you are tracing the arrows to apply to the map.
